

Art in Classrooms

Children love making things, and even if more often than not, they create a mess as well, you've got to give them kudos for being the creative little spirits that they are.

Any form of creativity is a healthy and relaxing outlet.

Craft making also involves working with one's hands, which builds dexterity and motor function. Plus, crafts are just plain fun. Kids love getting involved in fun projects that engage their mind and hands. Craft also play a vital role in socialization process. Crafts are also a great way to channelize your child's energy in positive direction. It is a great learning tool too. Artworx projects will subtly teach kids how to follow instructions, and children will soon learn that following instructions can be both fun and rewarding.

1. Creativity and Production

Creativity engages a number of mental processes, such as problem solving, idea generation, and comprehension. Making something from raw material also comes with considerable personal rewards and a sense of accomplishment. It's far better than watching TV or playing Video Games.

Creative actions serve to increase self-awareness and promote self-acknowledgement.

Kids who engage in craft making will hone their creative skills and learn how to be productive.

2. Motor Skills

one of the most important developmental phases for children is that time when they begin to master basic motor skills and eye-hand-Mind coordination. Learning to use fingers and hands deftly is an ongoing process which can be helped along through a variety of activities, including crafting. Using pens and pencils, scissors, glue, and a variety of other craft tools and supplies is a great way to encourage dexterity.

3. Following Instructions

while plenty of craft projects are flexible enough to allow children to explore their ingenuity, most of them involve a set of instructions that must be followed in order to produce the final product. You've got to give them kudos for being the creative little spirits that they are such projects will subtly teach kids how to follow instructions and children will soon learn that following instructions can be both fun and rewarding.

3. Having Fun

Crafts are fun and instructional for children. Sure, they can be a lot of work for the adult who needs to set up, supervise and assist; but the idea is to do something enjoyable together, and allow the child the pride of creation and sense of mastery to be able to say, "Look, I made this myself!" Having fun is a cornerstone of childhood, and its value should never be discounted when coming up with interesting activities for children to explore.

4. Socialisation Process

Crafts are a great tool in socialisation process. They make puppets, masks, animals, models, decorations, dresses, frames, flowers and many other such things. Most of them are related with our society and culture and kids use them in their play to get experience of these things. Crafts are nowadays essential tools of learning during early childhood education.

5. Logical Thinking:

Different crafts need choice of material, measurement, scaling and resizing. To develop a beautiful craft you will need to analyse and decide about the materials, size, colours and other such aspects. Origami, 3D paper Modelling, Paper Aero modelling etc are some of the crafts which require maths, geometrical and logical skills. Children learn and exposed to the mathematical equations in practical.
